

# Courier Management System - Design Document

## Project Title

Courier Management System

## Objective

To design a system that manages courier booking, tracking, delivery, and user management efficiently for both admin and users.

## System Architecture

User (Customer) <-> Web Interface <-> Application Server <-> Database Server <-> Admin Panel

## User Roles

- Admin: Manage couriers, view reports, manage users.
- Customer: Book courier, track parcel.
- Courier Agent: Update delivery status.

## UI Design (Screens Overview)

Login Page: Secure login for admin, agents & users

Dashboard: Summary of deliveries, bookings, and users

Book Courier: Form to send parcel with pickup/drop info

Track Courier: Tracking ID input to check parcel status

Delivery Status: Agent updates delivery progress

Admin Panel: Manage users, couriers, reports

## Database Design

Users: ID, Name, Email, Role, Password

Couriers: ID, Sender, Receiver, Status, Date

Tracking: ID, CourierID, Location, Timestamp

Admin Logs: ID, Action, DateTime

## **Technology Stack**

- Frontend: HTML, CSS, JavaScript (Bootstrap)
- Backend: PHP / Laravel / Node.js
- Database: MySQL
- Tracking: GPS API (optional)

## **Key Features**

- Courier Booking & Tracking
- Admin Dashboard & Reports
- Email/SMS Notifications (optional)
- Secure Login System
- Delivery Status Updates
